Preface

We wish to express our thanks to all the employers who supplied the necessary occupational employment data on which the estimates presented herein are based; to the Maine Department of Administration, Bureau of Human Resources for making their files available in the requested format; the Department of Transportation; and the U.S. Department of Labor, Bureau of Labor Statistics for supplying the occupational data for Maine's federal government employees. This publication would not have been possible without their cooperation.

We also wish to express our thanks to the U.S. Bureau of Labor Statistics, both in Washington, D.C. and the regional level in Boston, Massachusetts, for their assistance in this federal-state cooperative effort. Special thanks also go to Brenda Evans and Kerry Tims for word processing support, and to David Gilbert for providing graphics support.

This publication describes the three levels of government in terms of their occupational composition. It tells what occupations are found in each industry, and the number of workers employed in these occupations. This type of data has many uses, both public and private. Employers use this data to compare their staffing to their industry. Vocational advisors in high schools, trade and technical colleges, universities, and government employment offices use this data to help place current job seekers and to advise those of the future. This data helps determine what skills would be needed to attract a new firm or industry into an area. The information also gives insight into what jobs might be lost should an industry experience massive reductions in employment. Also, this data forms the basis of the state's occupational employment projections program. The output of this program helps job training specialists and planners from economic development agencies to plan for the future.

For further information regarding this report, please write or call Wendy Nelson, Occupational Employment Statistics Program Manager, at (207) 287-2271.

Introduction

This publication is one of a continuing number of reports covering occupational employment for selected industries in Maine. The information in these reports relates to part of a comprehensive "labor market and occupational supply and demand information system" which is provided for by the Job Training Partnership Act of 1982 and reinforced by the Carl D. Perkins Vocational and Applied Technology Education Act Amendments of 1990. This federal legislation, coupled with the rapidly expanding public awareness of the need for more vocational training, have resulted in an unparalleled demand for current employment data and projections of future employment requirements by occupation.

The Occupational Employment Statistics (OES) Program supplies the occupational data leading to an "Occupational Supply and Demand Information System." The program is a federal-state endeavor involving all state employment security agencies throughout the nation, in conjunction with the U.S. Bureau of Labor Statistics. The OES program consists of two components: survey operations and industry-occupational matrices. The data from this program is then used in our occupational employment projections program.

The first part of the OES program consists primarily of collecting occupational employment data by industry through a survey questionnaire mailed to a sample of employers throughout the State. The sample data received is expanded using a system of weights, nonresponse adjustment factors, and benchmark factors to produce statewide staffing patterns for each industry. These staffing patterns can be applied to current or projected estimates of industrial employment to produce estimates of employment by occupation for the State or substate areas. This sample data is also submitted to the U.S. Bureau of Labor Statistics for input into National occupational employment statistics, by industry.

This publication, a direct result of the survey phase of the OES program, contains the staffing patterns for federal, state, and local governments. The actual employment data was collected for the week of the 12th of May 1994 for state and local governments, and as of March 31, 1994 for federal government.

Along with government, this year's OES survey included the following industries: educational services; and transportation, communications, electric, gas and sanitary services, and wholesale and retail trade. Two separate publications are available covering these industries.

Other booklets have already been published covering nearly all wage and salary workers in Maine. A list of these can be found at the end of this publication. Approximately one-third of the State's industries will be surveyed each year, so that the entire economy will be covered every three years. Using this cycle, employers are asked to provide occupational data only once every three years. This ensures that no part of the data base is over three years old, and that significant changes in the staffing patterns of industries can be identified early, as the trend develops.

The information obtained from these surveys is used in the second phase of the OES program to construct industry-occupation matrices covering all sectors of our economy. These matrices, in turn, provide the data base used to project future occupational needs in the state of Maine.

Wage Collection in OES

Along with occupational employment data, occupational wage data is being collected through the Occupational Employment Statistics (OES) Program in some states, Maine being one. This wage data is solicited for all occupations, from all sampled employers. The wages collected are not actual wages, but wage ranges. The ranges are broken down into 11 categories as follows:

Range	Hourly	Annual
A	Under \$5.00	Under \$10,400
B	\$5.00 - 6.49	\$10,400 - 13,519
C	\$6.50 - 8.99	\$13,520 - 18,719
D	\$9.00 - 11.99	\$18,720 - 24,959
E	\$12.00 - 15.99	\$24,960 - 33,279
F	\$16.00 - 19.99	\$33,280 - 41,599
G	\$20.00 - 24.99	\$41,600 - 51,999
H	\$25.00 - 34.99	\$52,000 - 72,799
I	\$35.00 - 44.99	\$72,800 - 93,599
J	\$45.00 - 59.99	\$93,600 - 124,799
K	\$60.00 and over	\$124,800 and over

The U.S. Bureau of Labor Statistics determined that even though the data had been collected by ranges only, the mean, median, 25th percentile and 75th percentile could be accurately calculated. For this publication, only the mean, or average, hourly wage and the median hourly wage has been included. It should be noted that to produce this average hourly wage, it was assumed that full-time employees worked a 40-hour week. Also, it was requested during wage collection, that hourly, rather than annual wages be reported for all part-time workers.

Wages collected represent straight-time wages (or earnings); that is, total earnings before payroll deductions, excluding premium pay for overtime and for work on weekends, holidays, and late shifts. Also excluded are performance bonuses and lump sum payment, as well as profit-sharing payments, attendance bonuses, holiday or year-end bonuses, and other nonproduction bonuses. Pay increases, but not bonuses, under cost-of-living allowance clauses, incentive payments (such as those resulting from piecework, production bonuses, and commissions), and longevity are included as part of the regular pay.

Figure 1
Employment in Federal, State, and Local Governments
1984-1994 ¹

¹ Federal Government employment includes employment in postal services and hospitals. State and local Government employment excludes employment in hospitals and schools operated by state and local governments.

Methodology

Federal Government, Including Hospitals and Postal Services

The occupational employment data for this survey was submitted by the U.S. Department of Labor, Bureau of Labor Statistics. The data was taken from the Central Personnel Data File (CPDF) maintained by the Office of Personnel Management (OPM) and from the United States Postal Service (USPS) information system, and was converted to the Occupational Employment Statistics (OES) occupational classification system.

The data represented in this publication includes full-time temporary, full-time permanent, part-time temporary, and part-time permanent employees on the federal payroll who were paid in the State of Maine as of March 1994, including workers employed in federal hospitals and postal services. Because this represents a total count, or census, the figures have not been rounded, and there is no relative error, since the data was not estimated from a sample.

State Government, Excluding Hospitals and Schools

The employment data for state government was taken from the "employee file" maintained by the Maine Department of Administration, Bureau of Human Resources. This file covers nearly all classified and unclassified persons employed by the State of Maine. However, several units had to be excluded as they were not included in this survey - hospitals and schools. Several state government units, which were not included in the "employee file" were surveyed separately. They were the Maine Turnpike Authority, the Maine Housing Authority, the Maine Finance Authority, the Maine Municipal Bond Bank, the Maine Veterans Home, and the outstationed work crews in the Department of Transportation.

The data was collected as of May 12, 1994. The state has approximately 1,200 different job titles, all of which were converted to the Occupational Employment Statistics (OES) occupational classification system.

Since the data represents a total count, or census, and was not estimated from a sample, there are no relative errors.

Local Government, Excluding Hospitals and Schools

The second quarter 1993 report of Employment, Wages, and Contributions covered by the Maine Employment Security Law was used as the sampling frame for the survey of local government. This universe consisted of 395 units employing a total of 16,383 workers. Of these, the survey included 105 units, or 26.6 percent of the universe. These sample units employed 10,577 workers, accounting for 64.6 percent of the total universe employment in this industry.

This survey consisted of an initial mailing and two follow-up mailings to nonrespondents. Occupational and wage range data was requested for the week of May 12, 1994. Phone calls and personal visits were made to those nonresponding units whose responses were considered critical for

valid estimates. Usable responses were received from 77 units or 78.3 percent of the 105 sampled units. These responding units employed 7,957 workers or 75.2 percent of the total sampled employment of 10,577.

Each completed questionnaire returned was edited and screened both manually and mechanically for consistency and accuracy. The survey data was then expanded to total wage and salary employment for the industry using a series of nonresponse adjustment factors, weights, and benchmark factors. This total wage and salary employment was derived from the second quarter 1994 ES-202 report of Employment, Wages, and Contributions covered by the Maine Employment Security Law. Employment in hospitals and educational services was excluded, as these industries are covered by their own surveys.

A word about the accuracy of the local government occupational and wage estimates published here. There are two types of errors which affect the accuracy of the estimates - sampling and nonsampling errors. Sampling error is a specific arithmetic measure of the precision of an estimate. It is the difference between the estimate computed from the sample data and the result that would be obtained if the same methods were used to collect identical information from the entire population or universe. The relative error entries listed in this report are the sampling error of each occupation expressed as a percent of that occupational estimate. In other words, relative error means that the chances are two out of three (a 68 percent confidence level) that the results of a comparable full-scale data collection (the universe) using the same survey approach would not differ from the estimates published here by more than the percent error shown. The chances are 19 out of 20 (a 95 percent confidence level) that the results from the two methods of data collection (sample versus census) would not differ by more than twice the percent error shown. For example, it is estimated in this report that there were 1,180 police patrol officers employed by local governments with a 6 percent relative error. Thus, at a 68 percent confidence level, the results of a full-scale count of police patrol officers would not differ from this estimate by more than 71 workers (1,180 times .06). At a 95 percent confidence level, the universe count would not differ from the estimate by more than 12 percent of 1,180 or 142 workers.

Nonsampling errors result from external factors in a survey rather than from the fact that a sampling technique was used. Examples of these errors are: response refusals, response errors, processing errors, computational errors, etc. The possibility of these errors was recognized from the start of the survey and every effort was made to avoid them.

Notes About the Tables

Employment

Total employment in federal government was derived from the Central Personnel Data File (CPDF) system maintained by the Office of Personnel Management (OPM) and from the United States Postal Service (USPS) information system. The data includes full-time temporary, full-time permanent, part-time temporary, and part-time permanent employees on the federal payroll who were paid in the state of Maine as of March 31, 1994. Occupational employment data for certain federal agencies are not centrally maintained by the OPM and are not included in the CPDF, thus are not included here. For a listing of these agencies, please contact the Maine Department of Labor, Division of Economic Analysis and Research, at 207-287-2271, or PO Box 309, Augusta, Maine 04332-6826.

Total employment in state government includes employment in all state government units as of May 12, 1994, except workers in state-operated hospitals, and educational services such as elementary and secondary schools, vocational high schools, universities, colleges, and technical institutes. Employment includes both full and part-time personnel.

Total employment in local government includes employment in all municipal or quasi-municipal units as of May 12, 1994, except local government-owned hospitals, elementary and secondary schools, vocational high schools, universities, colleges, junior colleges, and technical institutes.

Relative Error (in %)

The relative errors listed for local government occupational employment were computed only for specific occupations and not for residual categories nor for occupational groupings. If the relative error of an occupation exceeded 50 percent, the employment for that occupation was added to the residual category relevant to it. For an example of how the relative error is applied, see the Methodology for local government. Because the occupational employment data for federal and state government were aggregated from universe files rather than estimated from a sample of employers, no relative errors exist.

Establishments Reporting the Occupations (%)

The percent of local government establishments reporting each occupation could not be readily calculated for groups of occupations, but only for specific occupations.

Abbreviations

SIC - Standard Industrial Classification, as defined in the 1987 edition of the *Standard Industrial Classification Manual*, prepared by the Executive Office of the President, Office of Management and Budget, Statistical Policy Division.
